

ISO Registered Company

MODEL 123-1+6+S

HIGH PRESSURE VERSION DIFFERENTIAL BACK PRESSURE RELIEF REGULATOR

MODEL 123-1+6+S

OVERVIEW

Model 123-1+6+S is a “high pressure variation” of the basic Model 123-1+6 differential back pressure relief regulator. Inlet pressure may be as high as 1500 psig (103 Barg). Differential pressures may vary from 15–350 psid (1.03–24.1 Bard) in sizes through 1” (DN25), and from 10–230 psig (0.7–15.9 Bard) for size 1-1/2” (DN40). Model 123-1+6+S is NOT available for body size 2” (DN50)

FEATURES

- High Pressure operation.
- NACE or Non-NACE constructions.
- Anit-blowout adjusting screw assembly with closing cap.
- Standard non-asbestos gaskets.

APPLICATIONS

Most commonly applied to develop a constant differential pressure across a rotating shaft seal, providing proper sealing and lubricating conditions over varying pressure ranges. May be applied in liquid or gaseous services.

⚠ CAUTION

DO NOT APPLY IN STEAM SERVICE

DO NOT APPLY IN OXYGEN SERVICE

⚠ CAUTION

THIS IS NOT A SAFETY DEVICE AND MUST NOT BE SUBSTITUTED FOR A CODE APPROVED PRESSURE SAFETY RELIEF VALVE OR RUPTURE DISC.

LINE SIZES AVAILABLE

1/2” (DN15), 3/4” (DN20) 1” (DN25)
1-1/2” (DN40)

END CONNECTIONS

NPT, RF FLANGED

COMMON APPLICATIONS

LIQUID, GASEOUS SERVICES

DESIGN PRESSURE

INLET: UP TO 1500 psig (103 Barg)

OUTLET: UP TO 1480 psig (102 Barg)

STANDARD / GENERAL SPECIFICATIONS

Body Sizes:	1/2", 3/4", 1" and 1-1/2". (DN 15, 20, 25 and 40).		<u>All O-rings</u> – Fluorocarbon Elastomer (FKM). <u>Gaskets</u> – None. <u>Thread Seal Washer</u> – 18-8 SST + FKM. <u>Backup Ring</u> – PTFE - split.
Body/Spring Chamber Materials:	CS/CS only. CS = Carbon Steel.	Inlet Pressure:	Up to 1500 psig (103 Barg). May be limited if Opt-30/600# flanges are applied.
Outlet Pressure:	Up to 1480 psig (102 Barg).	Flange Bolting:	All bolting is alloy steel, zinc plated. <u>Studs:</u> ASTM A-193, Gr. B7. <u>Nuts:</u> ASTM A194, Gr. 2H. <u>Cap Screws:</u> ASTM A-193, Gr. B7.
Temperature Range:	-20° to +400°F (-29° to +205°C).	NOTE:	All studs are elongated to allow bracket mounting; bracket by customer.
Maximum Pressure Drop:	No limit for liquid-oil or gaseous service. Consult factory for other fluids.	Miscellaneous Internal Mat'ls:	<u>Spring Chamber Zone</u> – Closing Cap – 316 SST. Adj. Screw Jam Nut – 316 SST. Adj. Screw – 17-4 PH SST. * Adj. Screw Housing – 316 SST Pressure Plate – <u>Std.</u> – All sizes – CS. <u>Opt-40 NACE</u> – 316 SST. Spring Button – <u>Std.</u> – All sizes – CI or CS. <u>Opt-40 NACE</u> – 316 SST. Range Spring – Epoxy coated if CS. <u>Std.</u> – All Sizes – CS. <u>Opt-40 NACE</u> – Inconel X-750 * Welded to spring chamber.
Capacity:	Up to 7.5 Cv.	Differential Pressure Range:	10–350 psid (0.7–24.1 Bard) with multiple range springs. Varies with body size.
Internal Trim Materials:	Metal seated design ONLY. Trim Designation No. S40S; 316 SST metallic parts, fluorocarbon elastomer diaphragm. Opt-40 NACE includes TFE diaphragm covers.	Body Zone –	Pusher Plate – <u>Std.</u> – All sizes – CS. <u>Opt-40 NACE</u> – 316 SST.
Gaskets & Seals:	Std. – Non-asbestos.	Paint:	<u>Standard:</u> All non-corrosion resistant portions to be painted with corrosion resistant epoxy paint per Cashco Spec #S-1606.

Body Size		Differential Pressure Range	
in	(DN)	psid	(Bard)
1/2, 3/4", 1"	(15, 20, 25)	15-350	(1.03-24.1)
1-1/2"	(40)	10-230	(0.7-15.9)

OPTION SPECIFICATIONS

Option -30:	<p><u>FLANGED END CONNECTIONS.</u> Welded-on 600#, 900# or 1500# raised face flanges. Pipe nipples and flanges of same basic materials as body. Pipe nipples are seal welded after screwing into body; flanges are socket welded to pipe nipples. Flange pressure class is same for inlet and outlet.</p> <p>With 600# flanges, the pressure rating is limited by flange P vs. T ratings. For 900# and 1500# flanges, the pressure rating is limited by the body P vs. T ratings.</p> <p>All welding procedures in compliance with ASME Boiler & Pressure Vessel Code, Section IX, and American Petroleum Institute API-614 requirements.</p> <p>A third body flanged connection may be specified as Opt-30+33.</p>	Option -33:	<p><u>THIRD BODY CONNECTION.</u> This option eliminates a pipe tee when the Model 123-1+6+S is installed in the pump outlet piping. The bottom connection handles the outlet discharge fluid. The two side connections are "pass-through", and are at the same inlet pressure conditions.</p>
Option -40:	<p><u>NACE CONSTRUCTION.</u> Internal wetted portions meet NACE Std. MRO175 revision, when the exterior of the regulator is not directly exposed to a sour environment, buried, insulated or otherwise denied direct atmospheric exposure.</p> <p>Diaphragm bolting is standard bolting, and meets NACE MRO175 Section 6.3 requirements.</p>		

APPLICATION AND SELECTION

FUNCTIONAL OPERATION OF DIFFERENTIAL BACK PRESSURE RELIEF REGULATORS

Differential back pressure relief regulators operate in accordance with the parameters as indicated in Figure 1.

Sometimes called “tracking” regulators, a differential back pressure regulator always has the P_1 – Inlet Pressure greater than the P_3 - Loading Pressure by a relatively constant pressure differential – determined by the range spring. (See Graph 1.)

If P_3 decreases by 15 psig (1 Barg), then P_1 will also

decrease by the same 15 psig (1 Barg). If P_3 increases by 29 psig (2 Barg), the P_1 increases by 29 psig (2 Barg). Thus, P_1 “tracks” P_3 , with the differential pressure between P_3 and P_1 being relatively constant at ΔP_{DIFF} , as determined by the range spring set pressure.

Figure 1: Model 123-1+6+S+33

Graph 1: Differential Back Pressure Relief Regulator

Cashco recommends that All Model 123-1+6+S units be sized and selected by Factory personnel. The following data must be available for a proper sizing and selection:

- a. Body Service Fluid – What is it? Liquid or Gas? Specific gravity or weight density? Is it corrosive?
- b. Loading Service Fluid – What is it? Liquid or Gas? Specific gravity or weight density? Is it corrosive?
- c. Loading Pressure – P_3 (loading or reference pressure)? Max, Norm, Min conditions?
- d. Differential Pressure – ΔP_{DIFF} or P_{Set} ? Allowable deviation of ΔP_{DIFF} from P_3 max to P_3 min; i.e. acceptable “build”?
- e. Outlet Pressure – P_2 (downstream pressure)? Required to size body.
- f. Desired Capacity – Cv, GPM, SCFH at P_3 max and P_3 min to be bypassed across valve’s main orifice?
- g. Body Fluid Temperature – T_1 ?
- h. Loading Fluid Temperature – T_3 ?
- i. Minimum Ambient Temperature – T_{AMB} ? To ensure proper FKM performance.
- j. Body Fluid Viscosity – cP, SSU, cS?
